GENERAL DESCRIPTION

The circuitry used in this car radio incorporates 11 transistors and 12 diodes. An external antenna feeds the AM broadcasting signal to the converter. After going through 2 IF amplifiers and 1 diode detector, the signal passes through the 4 transistor audio amplifier circuit.

An external antenna feeds the FM broadcasting signal to the RF amplifier. After going through 4 IF amplifiers and 2 diode detectors, the signal passes through the 4 transistor audio amplifier circuit.

An AM AVC voltage is fed back to the RF amplifier and 1st IF amplifier.

An AFC voltage is fed back to the FM oscillator.

CHASSIS REMOVAL

- Remove the screws retaining the top and bottom covers on the bottom of the cabinet, and then remove the top and bottom covers.
- Remove the printed circuit board connecting kad from the printed circuit board.
- Remove a screw retaining the radiation panel on the bottom the cabinet.
- Remove the screws retaining the printed circuit board.
- 5. Remove the printed circuit board from the cabinet.

ALIGNMENT INSTRUCTIONS

Should it become necessary at any time to check the alignment of this receiver, proceed as follows;

- 1) Connect an output meter across the speaker voice coil lugs.
- 2) Set the volume control to maximum.
- 3) Attenuate the signals from the generator enough to swing the most sensitive range of the output meter.
- 4) Use a non-metallic alignment tool.
- 5) Repeat adjustments to insure good results.
